

Create safe, sacred spaces for people to talk about HIV	Advocate, educate and Bring Awareness	Social Media	The Future	My Story - Transparency	Evolution of Care - Expanded Collaboration	Funding and Resources
How has Christ positioned the church to take care of god's people - you don't choose heterosexuals to get AIDS too	Renewed community advocacy - educate the community about HIV and prevention	More advertisements and HIV awareness	Mandate HIV testing for all doctor visits in emergency rooms	Share real life experience - buddy system with peers to help get in care	More collaboration w/ partners - not work in silos	Additional funding
Be willing to speak and listen in Faith conversations between LGBTQ and heterosexuals - God won't strike you dead for doing this	More community engagement	Increase use of PrEP	HIV vaccination - maybe like Covid	Targeting youth about the seriousness of HIV - no fear	Early education on health, sexuality, & STD's, & HIV/AIDS	Better research and education around HIV
With Church - both sides need to speak and listen - non-judgmental forum	Educate about sexual networks - number of sex partners		More PrEP education	Addressing historical trauma - great with real life experiences	City-wide promotions - talk about HIV like you talk about Corona - promote HIV awareness and services this way	Silos are linked to funding - federal RFPs force you to enter into partnerships. State and local funding is limited - partnerships aren't funded, just connected - need to have more coordinated - funding classes us to be competitors
			Better healthcare system	More funding to remove barriers to care	Change the language of negative stereo types	Increase resources for co-occurring conditions
			More city officials on board - Mayor, police - raise awareness and talk about it		More walk-in testing sites	Housing 1st perspective - house someone first, deal with issues next. For PLWH, housing is first, then deal with everything else (adherence, etc.)
					Effective strategies to address stigma	Address socioeconomic challenges
					More collaboration with other partners	
					Non-traditional sites for HIV testing
